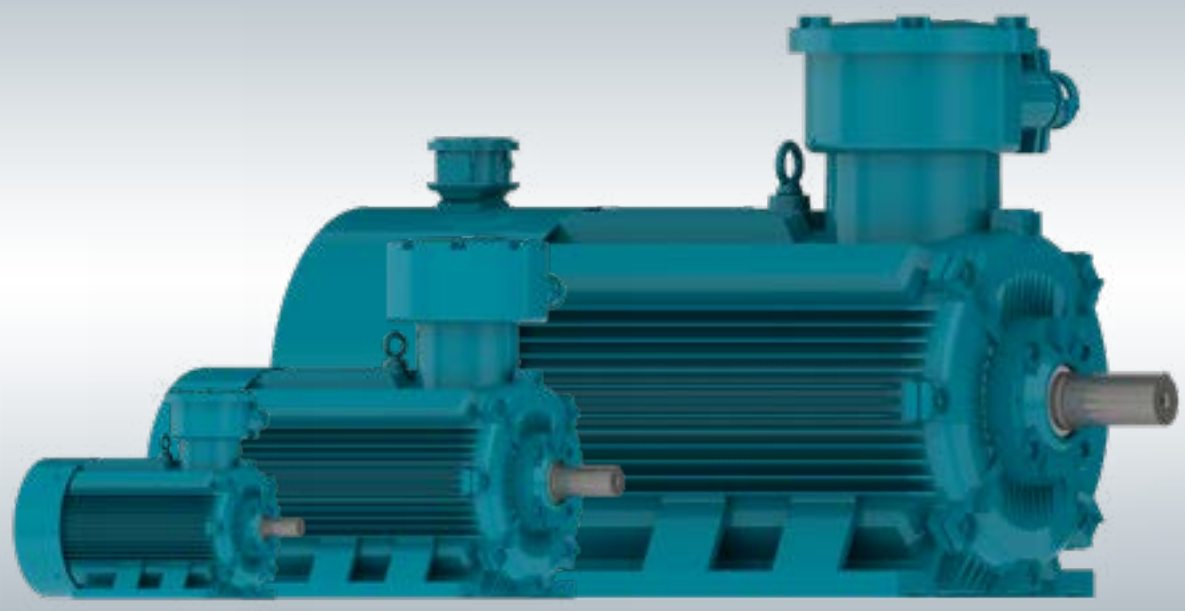
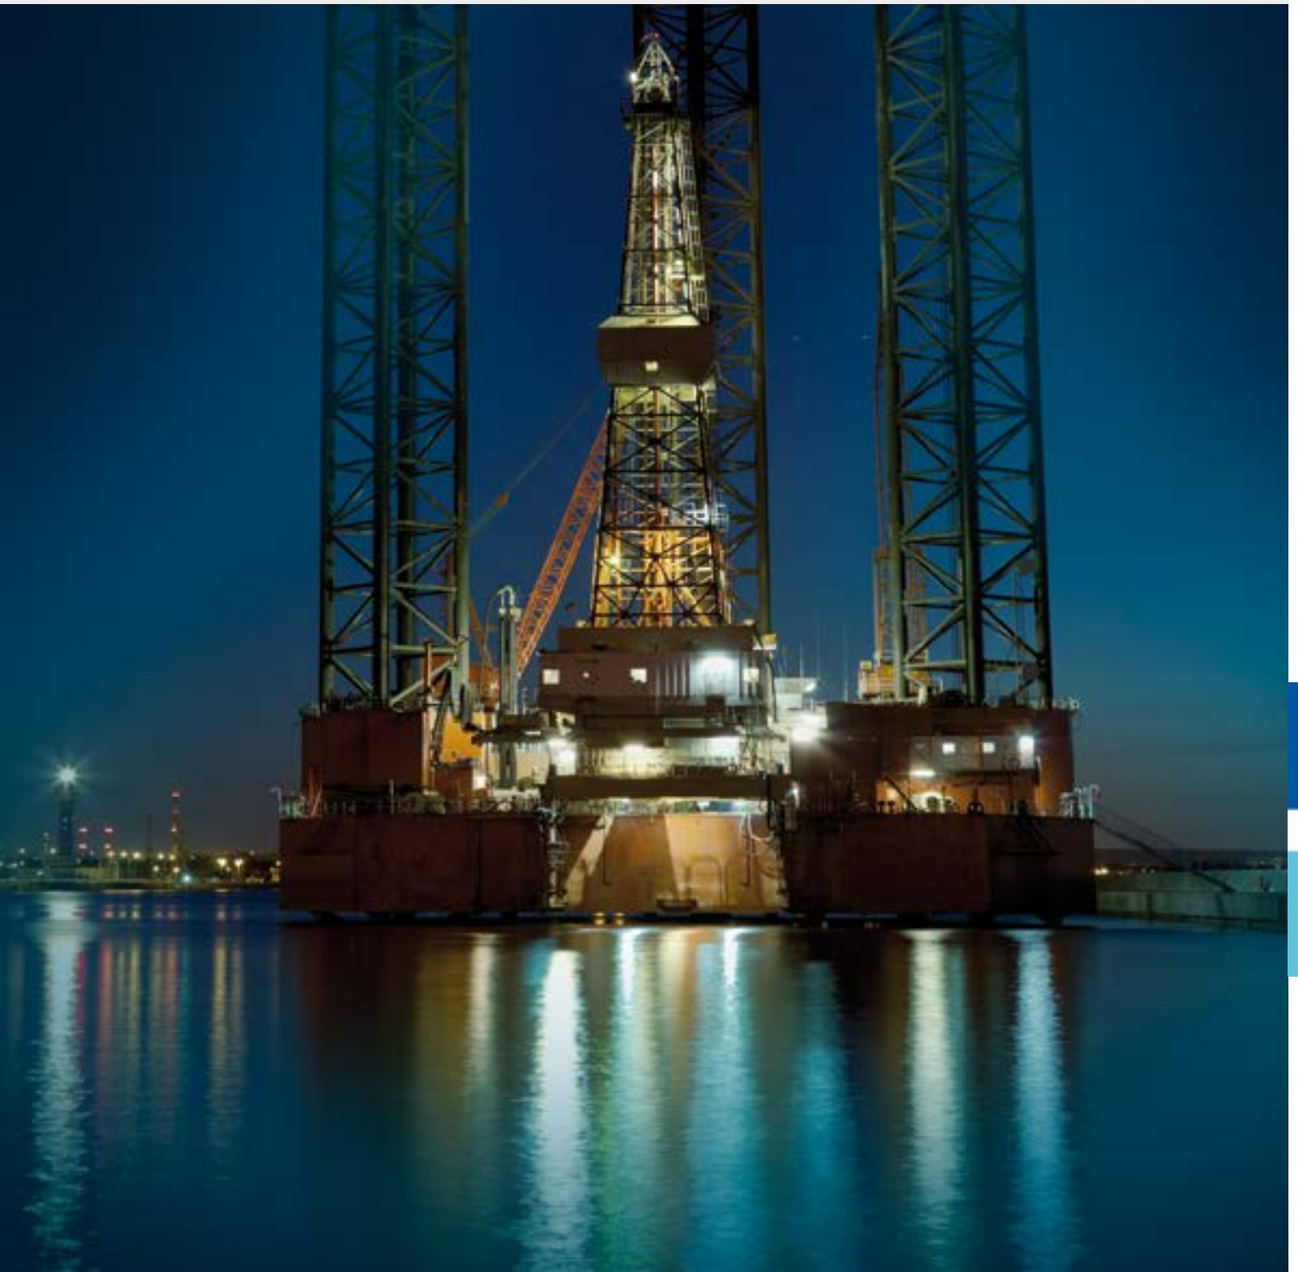
China Market



W21LX Flameproof Motors

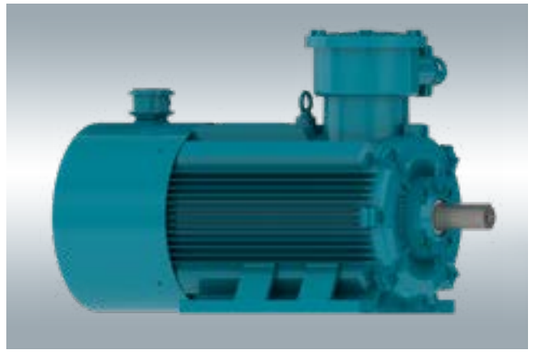
W21LX series motors have available “Ex d” flameproof type of protection (Zones 1 and 2) and Ex tD protection by enclosure DIP (Zones 21 and 22), the standard explosion proof level reaches Ex d IIB T4 Gb (Ex d IIC T4 Gb as optional) and Ex tD A21 IP65 T120°C respectively. Explosion proof motors are widely used in dangerous environments such as mining, cereal processing, production or treatment of volatile, solvent and corrosive chemical substances, steel and metallurgy, sewage treatment and other aggressive environment classified as “explosive atmospheres”. An atmosphere is considered explosive when the proportion of gas, vapor or dust in the atmosphere is such that a spark from an electrical circuit or heating in the equipment surface can cause an explosion.
Explosion proof motors can withstand the explosion inside of the motor shell and therefore will not cause ignition of the explosive atmosphere in the environment outside the motor.



Contents

Cast Iron Frame
W21LX2 Ex d – Frame-proof explosion proof motors

This series of explosion-proof motors are installed in places where explosive products are installed, produced or stored, which can ensure the safety of life and machinery and equipment. Its explosion-proof performance meets the requirements of GB3836.1-2010 “Explosive Atmosphere Part 1: General Requirements for Equipment” and GB3836.2-2010 “Explosive Atmosphere Part 2: Equipment Protected by Flameproof Enclosure “d””, and withstand all hazardous aspects presented in these environments. The motor is suitable to operate with VFD without compromising its’ performance, reliability and life-time.



Standard features:

Ex area: Ex d IIB T4

Electrical:

Voltage: 380V
Frequency: 50HZ
Efficiency: IE2
Insulation class: F
Temperature rise: 80k
Ambient temperature: -20°C -40°C
1000 meters above sea level
Service factor: 1.0
N design
S1 duty cycle

Mechanical:

Frame: 80-355 Cast iron frame
Mounting type: B3T
Cooling method: TEBC（IC416）
Protection level: IP55
Bearing type: ball bearing

Ex-d IIB T4:

	DE	NDE
80-160 Frame	ZZ-C3	ZZ-C3
180-280 Frame	C3	C3
315-355 Frame	C4(2P)/C3	C4(2P)/C3

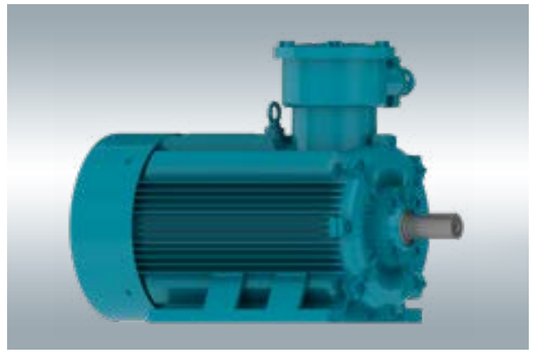
Ex-d IIC T4:

	DE	NDE
80-180 Frame	ZZ-C3	ZZ-C3
200-280 Frame	C3	C3
315-355 Frame	C4(2P)/C3	C4(2P)/C3

Shaft material: 45#
Grease Type: Great Wall Lubricant #2
180 frame and above with grease fitting
Fan: Plastic
Fan cover: Steel plate
Terminal box: cast iron (through hole for outlet)
Grounding: double grounding
Colour: RAL5009
Vibration level: Grade A

Cast Iron Frame
W21LX3 Ex d – Frame-proof explosion proof motors

This series of explosion-proof motors are installed in places where explosive products are produced or stored, which can ensure the safety of life and the safety of machinery and equipment. Its explosion-proof performance meets the requirements of GB3836.1-2010 “Explosive Environment Part 1: General Requirements for Equipment” and GB3836.2-2010 “Explosive Environment Part 2: Equipment Protected by Flameproof Enclosure “d””, and withstand all hazardous aspects presented in these environments.



Standard features:

Ex area: Ex d IIB T4

Electrical:

Voltage: 380V
Frequency: 50HZ
Efficiency: IE3
Insulation class: F
Temperature rise: 80k
Ambient temperature: -20°C -40°C
1000 meters above sea level
Service factor: 1.0
N design
S1 duty cycle

Mechanical:

Frame: 80-355 Cast iron frame
Mounting type: B3T
Cooling method: TEFC（IC411）
Protection level: IP55
Bearing type: ball bearing

Ex-d IIB T4:

	DE	NDE

Vibration level: Grade A

Cast Iron Frame
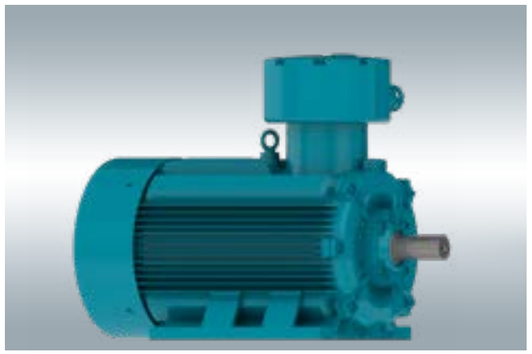
W21LXD Ex tD – Dust explosion proof motors

WEG W21LXD dust explosion-proof motor is safe due to its special design, suitable for working in hazardous areas-ZONE 21 (food production, grain, powder coating, polymer, etc.). Its explosion-proof performance complies with GB12476.1-2013 “Electrical Equipment for Flammable Dust Environment Part 1: General Requirements” and GB12476.5-2013 “Electrical Equipment for Flammable Dust Environment Part 5: Shell Protection Type “tD”” It is stipulated that the motor can ensure reliability and safety under working conditions with suspended conductive dust or surface accumulation.



Standard features:

Ex area: Ex tD A21 IP65 T120°C

Electrical:

Voltage: 380V
Frequency: 50HZ
Efficiency: IE3
Insulation class: F
Temperature rise: 80k
Ambient temperature: -20°C -40°C
1000 meters above sea level
Service factor: 1.0
N design
S1 duty cycle

Mechanical:

Frame: 80-355 Cast iron frame

Colour: RAL5009
Vibration level: Grade A

1.Introduction to China Explosion-proof Mandatory CCC Certification

CCC Ex certification

CCC Ex certification is the mandatory requirement in China about Explosion-proof electrical products.
From October 1st, 2020 on, hazardous application motors sold in China must be covered by CCC Ex product certification and marking.
The basic principles of the new certification rules are contained in the regulation CNCA-C23-01:2019 - Mandatory certification rules - Explosion-proof electrical equipment (also called CCC Ex). This regulation requires that all Ex products listed in the product catalog must undergo the following three-step CCC certification process, regardless of the manufacturing location:

1. Type testing (Ex product evaluation, testing and certification)
2. Initial inspection at the production site
3. Monitoring and re-certification audit at the manufacturing site

All products that have received a CCC-Ex certificate must carry the CCC mark in a clearly visible position. If the nature of the product makes it impossible to affix the CCC mark, it must be affixed to the smallest packaging unit and in the documentation.

The Ex-product must be marked with:

2. Hazardous Areas - Certification Requirements

Zone		Zone definition acc. to GB3836.14 & IEC/EN 60079-10-1 for gas atmospheres GB 12476.3 & IEC/EN 60079-10-2 for dust atmospheres	Assigned types of protection	Category acc.to 2014/34/EU	Equipment protection level acc. to GB3836.1 & IEC/EN 60079-0
Gas 1) 2)	Dust 1) 2)				
0	–	An area in which there is an explosive gas atmosphere constantly, over a long period or frequently.	Low-voltage motors not permitted	1	Ga
1	–	An area in which it is expected that an explosive gas atmosphere will occur occasionally during normal operation.	Ex e(GB) or Ex eb(IEC), Ex de, Ex d(GB) or Ex db(IEC)	2	Gb
2	–	An area in which it is expected that an explosive gas atmosphere will occur only rarely and then only briefly during normal operation.	Ex nA(GB) or Ex ec(IEC)	3	Gc
–	20	An area in which there is an explosive gas atmosphere comprising a dust-air mixture constantly, over a long period or frequently.	Low-voltage motors not permitted	1	Da
–	21	An area in which it is expected that an explosive gas atmosphere comprising a dust-air mixture will occur occasionally during normal operation.	Ex tb	2	Db
–	22	An area in which it is expected that an explosive gas atmosphere in the form of a cloud of flammable dust in air will occur only rarely and then only briefly during normal operation.	Ex tc 3)	3	Dc

3.Features and Benefits

Concept

The mechanical design of the W21LX line is based on the highly successful W21 general purpose motor range, with the incorporation of some innovative new features, including: modern frame design with new fins and feet to ensure higher mechanical stiffness and excellent heat dissipation; redesigned endshields to reduce bearing operating temperatures thus increasing the re-lubrication intervals; and an advanced cooling system to reduce noise levels and significantly improve heat dissipation.

Careful Features

In designing the W21LX line, special consideration was given to the needs of Industry to reduce their operating costs.
Aside from the energy saving aspects afforded by these machines, a variety of carefully chosen features were incorporated as standard to ensure maximum performance and durability:

Energy Efficiency

Besides relying on the safe operation of the product, users of W21LX motors can also reduce their energy consumption and CO_2 emissions due the technology employed and the levels of performance achieved.
The W21LX motor line was designed to meet the efficiency levels defined in IEC 60034-30-1 and GB 18613-2020. As standard the motors meet the IE4 Premium efficiency level and IE2 High efficiency as an optional for Variable Frequency Drive (VFD) operation.
The ratios between rated power, speed and frame size of the new W21LX line follow the applicable parts of the IEC Standards 60034 and 60072. This ensures interchangeability with existent motors and, where replacing lower efficiency motors, offers users the means to achieve a rapid return on their investment.

4. Version Classification

Standard version

Motor series	Ex Area	Cooling method	Efficiency Grade	Power Range (kW)	Certificate Type	Sales Regions
W21LX2	Ex d IIB T4	TEBC	IE2	0.55~315	CCC / CJEX	China
W21LX3	Ex d IIB T4	TEFC	IE3	0.55~315	CCC / CEL / CJEX	China
W21LX4	Ex d IIB T4	TEFC	IE4	5.5~315	CCC/CEL/CNEX	China
W21LXD	Ex tD A21 IP65 T120°C	TEFC	IE3	0.55~315	CCC / CJEX	China

Optional version*:

a) G=D-GE. GE's limit deviation is $(^{+0.10}_{0})$ for frame size 80 and below, and the rest are $(^{+0.20}_{0})$.
b) K hole position tolerance is based on the axis of shaft extension.
c) The external dimensions are reference dimensions.

Motors with base feet and flanges (with through holes) on the end cover

a) G=D-GE. GE's limit deviation is $(^{+0.10}_{0})$ for frame size 80, and the rest are $(^{+0.20}_{0})$.
b) The position tolerance of the K and S holes is based on the axis of the shaft extension.
c) P size is the maximum limit.
d) R is the distance from the flange mating surface to the shaft extension shoulder.
e) External dimensions are reference dimensions.

a) G=D-GE. GE's limit deviation is $(^{+0.10}_{0})$ for frame size 80, and the rest are $(^{+0.20}_{0})$.
b) The position tolerance of the K and S holes is based on the axis of the shaft extension.
c) P size is the maximum limit.
d) R is the distance from the flange mating surface to the shaft extension shoulder.
e) External dimensions are reference dimensions.

a) G=D-GE. GE's limit deviation is $(^{+0.10}_{0})$ for frame size 80, and the rest are $(^{+0.20}_{0})$.
b) The position tolerance of the K and S holes is based on the axis of the shaft extension.
c) P size is the maximum limit.
d) R is the distance from the flange mating surface to the shaft extension shoulder.
e) External dimensions are reference dimensions.

Motor with horizontal or vertical installation, base without feet, flange (with through hole) on the end cover

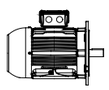
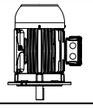
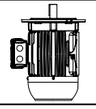
8. Mounting Forms

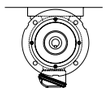
The following table shows the standard installation and other forms of W21LX motor. The letters after the specified mounting form (shown in the table below) define the location of the terminal box. Therefore, it can be noted that there is no IM code for motor installation in WEG documents. For example, IM B3 is written as B3, as shown below:

B3L - terminal box on left hand side of the motor frame
B3T - terminal box on top of the motor frame
B3R - terminal box on right hand side of the motor frame

Basic mountings	Other type of mounting				
IM B3	IM V5	IM V6	IM B6	IM B7	IM B8
IM 1001	IM 1011	IM 1031	IM 1051	IM 1061	IM 1071
					IM B35	IM V15	IM V36	- *)	- *)	- *)
IM 2001	IM 2011	IM 2031	IM 2051	IM 2061	IM 2071
					








Important:
1. *For motors mounted vertically shaft down fitting of a drip cover is recommended to prevent ingress of small objects into the fan cover. The increase in total length of the motor with drip cover is shown in the section 19.*
2. *For vertically shaft up mounted motors installed in environments containing liquids, the use of a rubber slinger is recommended to prevent the ingress of liquid into the motor through the shaft.*
