Cooling Tower Direct Drive System

In order to provide cooling towers with greater reliability and efficiency, WEG developed the Cooling Tower Direct Drive System to replace conventional cooling tower ventilation systems – formed by motor, driving shaft and gearbox – reducing mechanical losses, which enables higher performances.

The rotor of the Cooling Tower Direct Drive features permanent magnets which ensure high performance levels with high torque, even at low speeds. This new motor, since it does not require a gearbox, eliminates tower water contamination by the gearbox oil and presents great advantages to the system, such as lower consumption with the air flow control, fewer shutdowns for maintenance and lower noise.

Conventional System

The conventional tower ventilation system requires more mechanical repairs due to:

- Gearbox faults
- Oil contamination and leaks
- Mechanical misalignment
- Excessive vibrations

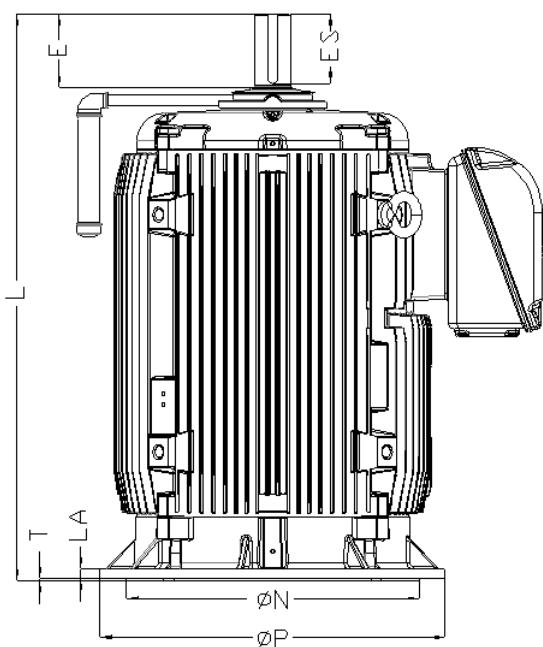

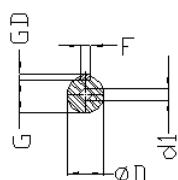

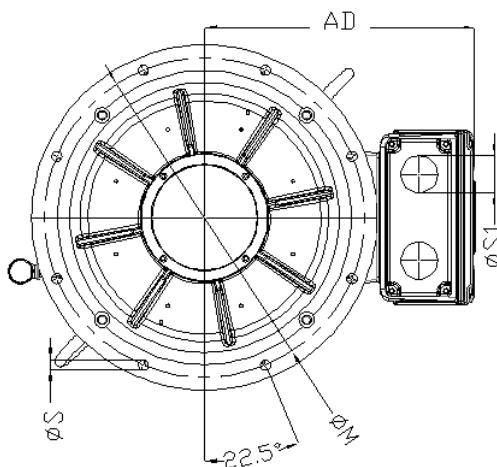

New System

Benefits

- Greater power efficiency
- Greater coupling efficiency
- Greater safety and reliability
- Less noise
- Less maintenance
- Reduction of mechanical losses by eliminating gearbox and driving shaft

Technical Data

Frame	Output cv (kW)	Speed (RPM)	Rated Torque (Nm)	Rated Current (A)	Efficiency η (%)	Power Factor (cos φ)
280S/M	25(18.5)	320	552	36,8	93,4	0,97
