## POLITHERM ARCHITECH

SOLUTIONS FOR SUBLIMATION

WEG Coatings presents to the market the Politherm Architech - Solutions for Sublimation, a technology that allows capturing from the nature the matrices, tones and contrasts of wood, stone, corten steel and applying them on aluminum surfaces for facades, doors, windows and much more.

## LEARN ABOUT THE SUBLIMATION PROCESS

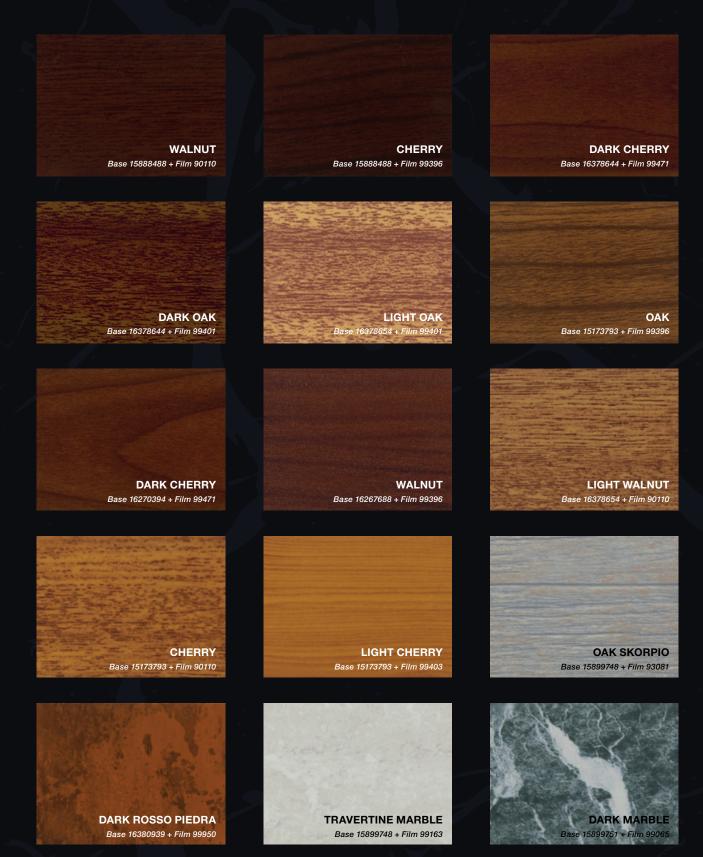

Sublimation of powder coating, also known as heat transfer printing process over powder coating (5' at 200°C) - consists of the application of a flexible, non-sticky plastic film, internally pre-stamped with an image that imitates some type of effect (wood, granite, marble, corten steel, etc.), made in specific equipment, under vacuum, over a metallic profile already painted with a colored base.

<sup>\*</sup> The colors presented in this catalog are indicative only and may present slight variations in tone.

## EFFECTS

Over 4.000 wood, stone and corten steel effects available.

<sup>\*</sup> The sublimation films above are from the Italian company SUBLITEX.

<sup>\*</sup> For other sublimation films suppliers or other product lines, the expected durability may vary. For any questions, consult our technical department.

Politherm ARCHITECH 86 WFS has been used in the aluminum profile market. In the formulation of this line, special pigments, superdurable polyester resins and excellent quality raw materials are used, providing high resistance in various colors, textures and glosses.

The weather resistance of this line provides a minimum expected durability of 16 years.

## TECHNICAL DATA

The technical data presented below refer to the minimum performance of the product to meet the referred qualifications, not necessarily representing the actual performance of the product.

Resistance 86 WFS

Color variation (DE)

After 1,000 hours of accelerated weathering test, xenon arc lamp. (ISO 16474-2, method A, cycle 1)

Gloss retention (%)

After 1,000 hours of accelerated weathering test, xenon arc lamp. (ISO 16474-2, method A, cycle 1)

Min. 70% of initial gloss

Minimum acceptable

value of 4 on the

**GREY** scale

according to ISO

105-A02

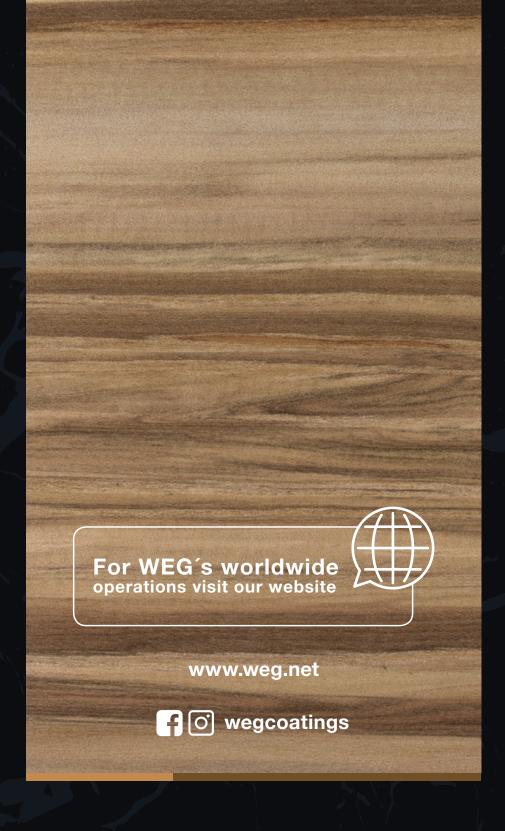

Natural weathering

Exposure to Florida (USA), 5° South (years)
